## Appendix: Mathematica script

As sketched in Section 3.3: "The Elimination lemma", in order to prove that the system  $F_3 = ... = F_6 = 0$  has a unique solution it is enough to compute the resultant Res<sup>3</sup><sub>6</sub> and show that it is not identically zero as a function on  $(\lambda, \alpha)$ .

```
<< Notation`
Symbolize [ \tilde{p} ]
Symbolize [ \tilde{\eta} ]
Symbolize [ \tilde{s} ]
Symbolize [ \tilde{c} ]
Symbolize [ \tilde{q} ]
Symbolize [ \lambda_1 ]
Symbolize [ \lambda_2 ]
Symbolize [ \alpha_0 ]
Symbolize [ \alpha_1 ]
Symbolize [ \alpha_2 ]
```

We first introduce the basic objects defining the normal forms for foliations F and  $\tilde{F}$  (cf. the begining of Section 4: "Definitions and normalizations").

```
\begin{split} \mathbf{r} &:= \mathbf{w} \wedge 2 - 1 \\ \mathbf{s} &:= \lambda_1 * (\mathbf{w} - 1) + \lambda_2 * (\mathbf{w} + 1) \\ \boldsymbol{\sigma} &:= \lambda_1 + \lambda_2 \\ \mathbf{p} &:= \alpha_1 * (\mathbf{w} - 1) + \alpha_2 (\mathbf{w} + 1) \\ \tilde{\mathbf{p}} &:= \beta_1 * (\mathbf{w} - 1) + \beta_2 * (\mathbf{w} + 1) \\ \boldsymbol{\eta} &:= \alpha_1 + \alpha_2 \\ \tilde{\boldsymbol{\eta}} &:= \beta_1 + \beta_2 \end{split}
```

We now proceed to define the polynomials  $S_d(w)$  and the coefficients  $c_d$  and their tilde-analogs which are defined in Definition 4.1 and Proposition 4.2. Explicit formulas for these objects appear at the beginning of Section 7: "Proof of Elimination lemma".

```
\begin{array}{l} S_2 := r \\ \widetilde{S}_2 := r \\ C_2 := \alpha_0 * (1 - \sigma) \\ \widetilde{C}_2 := \beta_0 * (1 - \sigma) \\ \\ S_3 := -s * p * r + (\eta - \alpha_0 * \sigma) * r \wedge 2 \\ \widetilde{S}_3 := -s * \widetilde{p} * r + (\widetilde{\eta} - \beta_0 * \sigma) * r \wedge 2 \\ C_3 := -\alpha_0 \wedge 2 * \sigma * (1 - \sigma) \\ \widetilde{C}_3 := -\beta_0 \wedge 2 * \sigma * (1 - \sigma) \\ \widetilde{C}_3 := -\beta_0 \wedge 2 * \sigma * (1 - \sigma) \\ \\ S_4 := -p * r \wedge 2 + \alpha_0 * (2 * \sigma - 1) * s * p * r \wedge 2 + \alpha_0 * \sigma * (\alpha_0 * \sigma - \eta) * r \wedge 3 \\ \widetilde{S}_4 := -\widetilde{p} * r \wedge 2 + \beta_0 * (2 * \sigma - 1) * s * \widetilde{p} * r \wedge 2 + \beta_0 * \sigma * (\beta_0 * \sigma - \widetilde{\eta}) * r \wedge 3 \\ C_4 := \alpha_0 \wedge 3 * \sigma \wedge 2 * (1 - \sigma) \\ \widetilde{C}_4 := \beta_0 \wedge 3 * \sigma \wedge 2 * (1 - \sigma) \end{array}
```
